

# SOCIAL RESPONSIBILITY

---

Our Stylepads and matching Functionals are ideal for anyone who believes in the importance of circular business practices. Because of its 'detachable' nature, our concept offers maximum flexibility and facilitates re-use. If a Stylepad or the Stylepad system breaks, just the specific part in question will need to be replaced. The hanging system is made from a durable ABS material, making it the perfect candidate for recycling.

## **MDF**

MDF is a sustainable choice of material and we buy it from the most sustainable supplier. The wood originates from European forests. Our MDF is an excellent choice in terms of CO2 footprint too: 80% of the MDF that we use for our plates is made up of wood chips. In actual fact, the plates store CO2, because of which they help to reduce climate change. Thanks to our return system, all undamaged MDF plates returned to us are recycled. Finally, MDF plates can be chipped an unlimited number of times, because of which they always stay in the raw material circle.

---

**BERBER**  
BV

---

Where return flows required are concerned, we work with Berber, a great company that separates all of our waste flows and makes maximum re-use possible. This company employs a number of people who are disadvantaged in the employment market.

**NE** DistriService

We have all of our products transported to customers by our partner NE DistriService, a company known for its high level of sustainability and reliability.
